

Learning from Interaction: Extracting knowledge from how users find, access, organize and share information resources

Dominik Benz

*Research Unit Knowledge and Data Engineering (KDE),
University of Kassel, Germany*

What I would like to discuss

- Understanding of (collaborative) user interaction patterns / with information resources
 - Which interactions (find, access, organize, share) „produce“ knowledge (emerging structures)?
 - When is it „ripe“ to be harvested?
- What „knowledge“ is to be learned?
 - Ontologies for personal / group / web use?
- How to ensure correctness of harvested knowledge?
 - Integration of existing knowledge sources / ontologies?
 - Unobtrusive / implicit feedback mechanisms?
