Hackathon: **Points to consider**

- Has the issues you are working to address been clearly defined?

- Do all members of the team clearly understand the issues?

- Has this work been done before? Or could it benefit from anything in the literature?

- How might you prototype and test these ideas during the seminar?

- Who or which organizations—within and outside this seminar—could collaborate to realize this work?

By Thursday morning coffee break, each group should have…

- Written statements on:
    - Who are target users (or audience) of your work?   [Nouns]
    - What will they do with your work?   [Verbs]
    - How does that improve transparency in quantitative research?

- Identify a part of your work that…
    - can demonstrate the **essence** of your work,
    - can be **prototyped concretely**, and
    - can **benefit from receiving feedback** from other seminar participants and/or the panelists on Thursday

- Working on **realizing that part as concrete as needed** to test if your idea works

- Identify **any input from other clusters** that you need and get them

- (If you finish early, and if applicable) reach out to some members of other clusters to test your prototype
